

Jamie Ramsden de Frutos

Junior Cybersecurity Analyst | Blue Team | Incident Response

Balearic Islands, Spain | +34 659 176 954 | jrf91@pm.me

Dear Álvaro,

Thank you for reaching out regarding the cybersecurity opportunity for a financial-sector client. I would be very interested in learning more, especially because the role is focused on security monitoring, incident response, threat detection and cloud environments.

I was interested to see Experis positioned as the IT consultancy of ManpowerGroup in Spain, with end-to-end digital transformation services and a Cloud and Infrastructure area that includes tailored cybersecurity solutions. That context fits the direction I am pursuing: practical Blue Team work where investigation, documentation and continuous learning create real operational value.

My fit for the role is strongest in three areas:

- Hands-on Blue Team practice through TryHackMe, Security Blue Team, Cisco, arcX, Cybrary and Splunk-focused labs.
- Relevant exposure to SIEM investigation, SPL/log analysis, digital forensics, threat intelligence, vulnerability management and incident handling fundamentals.
- Real-world experience in administration and IT support, including sensitive information handling, user support, issue documentation, prioritisation and clear communication under pressure.

I would welcome the opportunity to discuss how my training, native English and Spanish communication skills, and hands-on learning profile could contribute to the team supporting this financial-services environment.

Kind regards,

Jamie Ramsden de Frutos
